

ABSTRACT OF THE DISCLOSURE

There is provided an electronic apparatus capable of displaying same data on a plurality of display devices. The electronic apparatus includes a setting
5 unit which enables to individually set on a setting screen a wait time for turning off power to each of the plurality of display devices, and a power-off execution unit which turns off power to a display device, among the plurality of display devices, if a continuous time
10 of a state in which connection/disconnection of each display device is unchanged reaches the wait time set for the display device.
